DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 17 September 2003 has been entered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 38-44 are rejected under 35 U.S.C. 102(b) as being anticipated by Ito (US 5652067).

4. Regarding independent claim 43, Figure 1 of Ito shows an article comprising an organic electronic device which comprises a substrate (1); a patterned adhesive (8) on the substrate; a multi-layer structure comprising one or more organic layers (3, 4) between an anode (2) and a cathode (5), wherein the adhesive surrounds the multi-layer structure; and a sealing layer (9) wherein the adhesive is equal to the circumference of one or both of the substrate or sealing layer.

5. Regarding claim 38, Ito discloses that the adhesive is selected from the group comprising hot melt adhesive, pressure sensitive adhesives, curable adhesives, and filled adhesives (col. 19, ln. 56-61).
6. Regarding claim 39, Ito discloses that the filled adhesive is selected from the group comprising electrically conductive adhesives, thermally conductive adhesives, and desiccating adhesives (col. 19, ln. 56-61).
7. Regarding claim 40, Figure 1 of Ito shows the circumference of the adhesive layer being greater than that of an electrode.
8. Regarding claim 41, Ito discloses that the article is an organic electroluminescent device.
9. Regarding claim 42, Ito discloses the substrate comprising glass, the anode comprising ITO, the hole transporting layer comprising 4,4'-bis(naphthalene-2-yl)-N,N'-diphenyl benzidine, the light emitting layer comprising coumarin-doped tris(8-hydroxyquinolinato)aluminum, the electron transporting layer comprising bis(10-hydroxy-benzo(h)quinolinato) beryllium, bis(2-(2-hydroxy-phenyl)-benzothiazolato) zinc, 3,4,5-triphenyl-1,2,4-triazole, or 2-(4-biphenyl)-5-(4-t-butylphenyl)-1,3,4-oxadiazole, and the cathode comprising lithium fluoride and aluminum (col. 7).
10. Regarding claim 44, Figure 4 of Ito further shows the organic layers comprising a hole-transporting layer (3), a light-emitting layer (4), and an electron-transporting layer (12).

Response to Arguments

11. Applicant's arguments filed 17 September 2003 have been fully considered but they are not persuasive.

12. In response to applicant's argument that the adhesive in Ito both surrounds *and* covers the multi-layer structure while the adhesive of the instant application only surrounds the multi-layer structure, it is noted that Ito discloses the adhesive surrounding the multi-layer structure as claimed in the instant application. Applicant's claims do not exclude the adhesive covering the multi-layer structure.

13. The Examiner notes that applicant has amended independent claim 43 to recite the adhesive being *patterned*, as defined on page 9 of the specification. After further review, the Examiner concludes that the adhesive of Ito is also shown in the figures as a patterned structure. Claims in an application are given their broadest reasonable interpretation.
